### DO YOU NEED PROGRESSIVE LENSES?

Or are your current progressive lenses not working? Ask yourself. Do you:

- Have trouble reading in dim light? For example, is it difficult to read a menu in a dimly lit restaurant?
- Experience blurred vision when reading?
- Hold reading material at arm's length?
- Have presbyopia?

### WHAT IS PRESBYOPIA?

Presbyopia is a condition in which the lens of the eye gradually loses flexibility, making it difficult to focus on close objects. It happens to nearly everyone, usually starting around age 40.

## #1 PROGRESSIVE LENS BRAND WORLDWIDE<sup>1</sup>

Varilux lenses are designed with Essilor's proprietary **W.A.V.E. Technology: Wavefront Advanced Vision Enhancement®**, which eliminates the distortions found in other progressive lenses. This lets Varilux lenses offer sharp vision and smooth transitions at any distance, even in dim light. Take it all in without the annoying line of a bifocal lens, and enjoy natural vision. Forever.
